MIH ADAS / AD Dev Platform

ADAS – The must have app for new vehicles

From 2022, new cars and vans sold in Europe must be fitted with a raft of advanced driver assistance systems (ADAS) as standard – Euro NCAP.

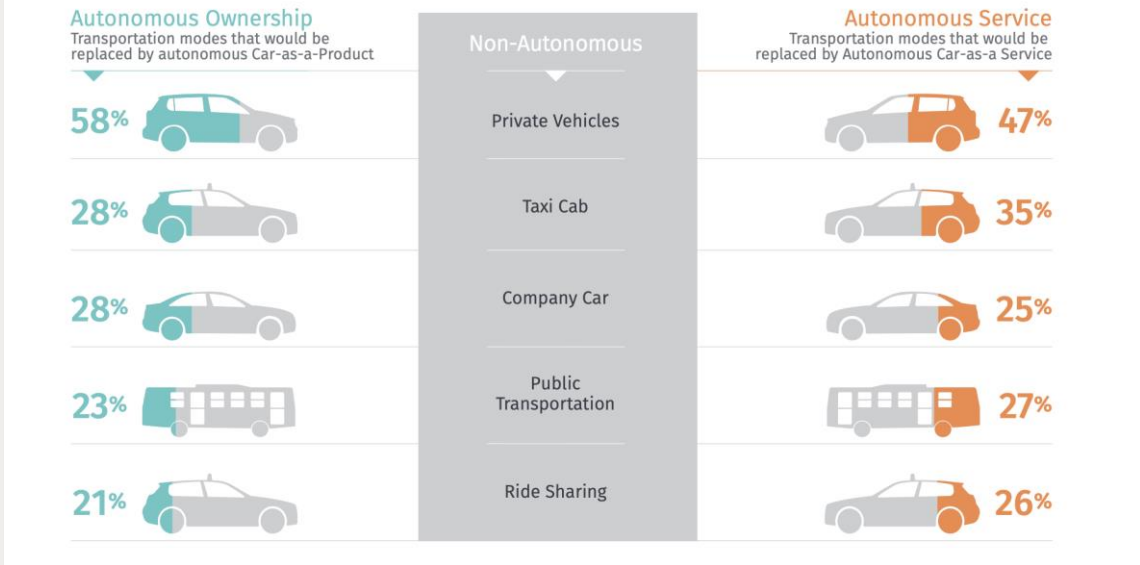

AD – The first killer app to revolutionize automotive industry

OEMs have an opportunity to move beyond the car to capture a large portion of this evolving market, with autonomous Car-as-a-Service and Car-as-a-Product playing a role.

Autonomous cars will eventually replace all types of transportation modes

ADAS / AD As Application

- **Competitive Pricing**

OEMs do not tie to a solution provider and/or invest resources on developing their own driver assistance features.

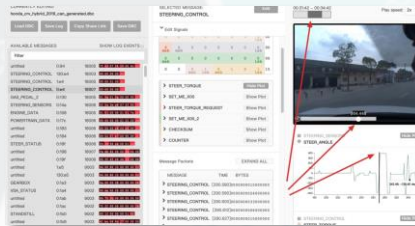

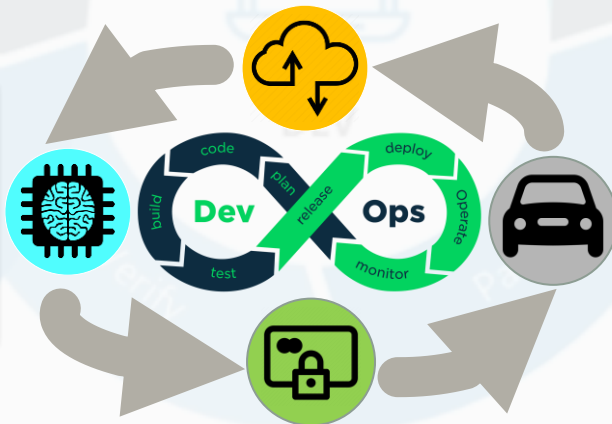

- **Improved User Experience**

Owners get to choose their preferred driver assistance applications and have them always up to date.

- **New Ecosystem**

Marketplace brings new business opportunity to OEMs and/or application developers, whether it's a Software-as-a-Service (SaaS) or a One-Time Fee product.

Development Process

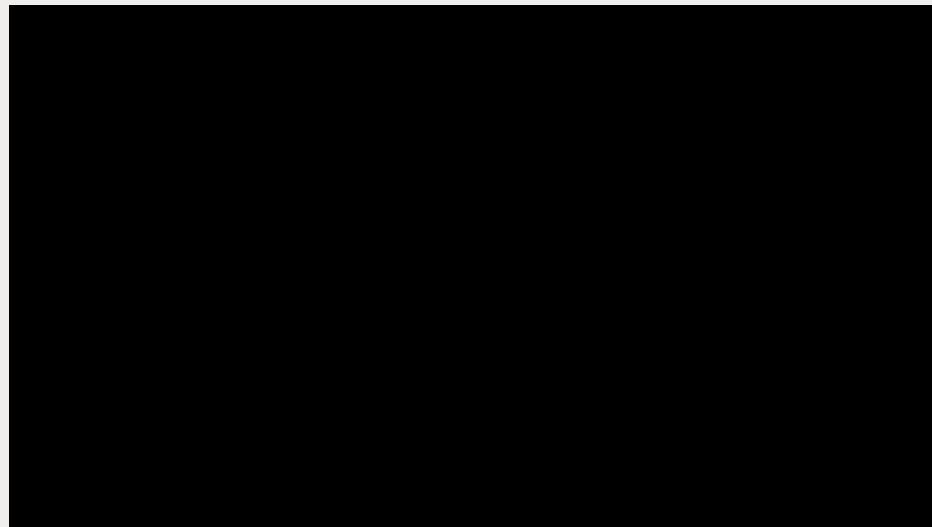

What You See Is What You Get (WYSIWYG)

MIH ADAS / AD Dev Platform helps you build and deploy driver assistance app to any MIH EVKit compatible vehicles.

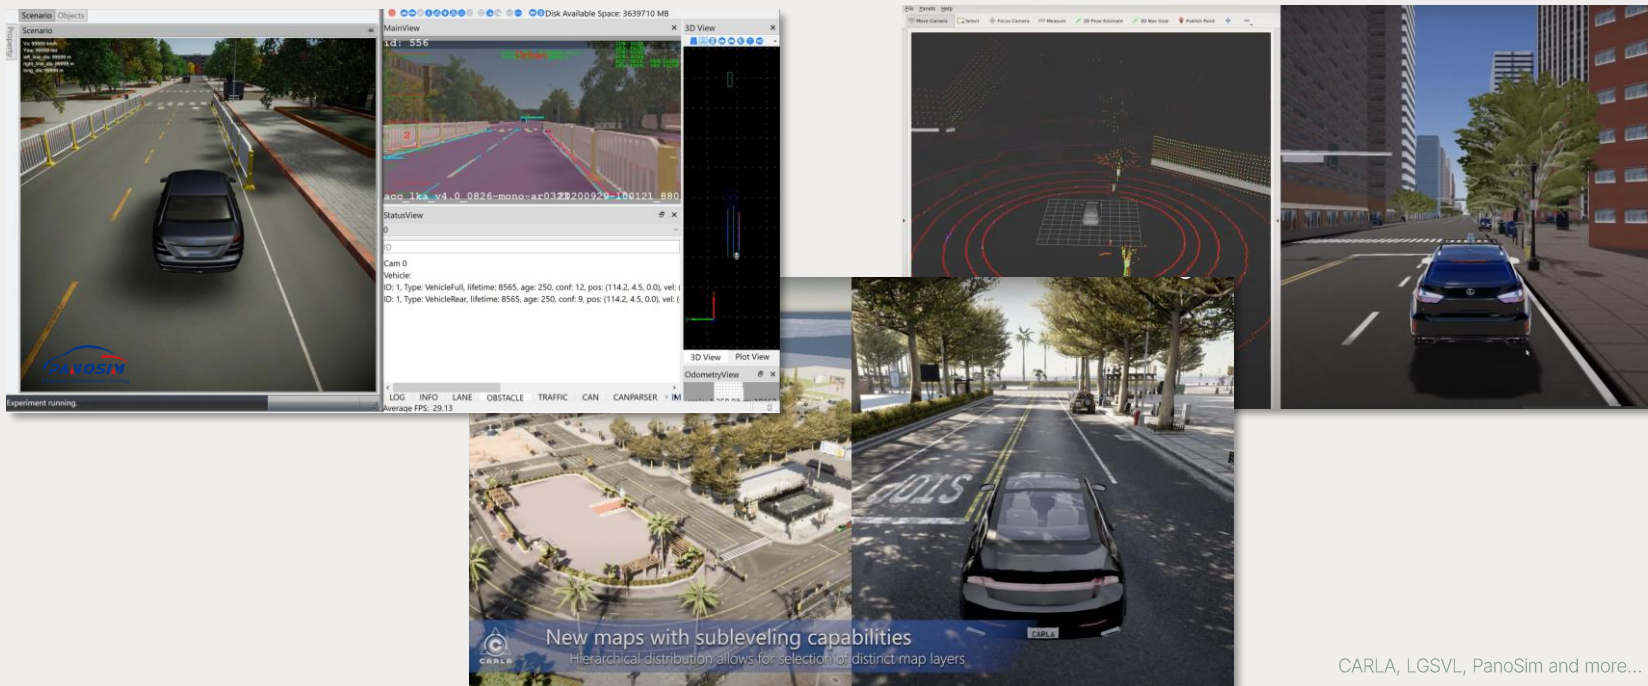

Build by developers for developers, the platform has every tool all on the cloud: from data collection to simulation testing.

Thanks to MIH API for bridging virtuality and reality, your app will drive on real vehicles just as good on the simulators.

Simulator Agnostic Integration

CARLA, LGSVL, PanoSim and more...

Thanks
